Abstract

This supplementary document provides the base-model checkpoint identifiers (Table S1) used in the experiments reported in the main manuscript.

Base-Model Checkpoint Identifiers

All three backbones were loaded from the Hugging Face Hub using `AutoModelForCausalLM.from_pretrained()` without an explicit `revision=` argument. The SHA-1 hashes in Table S1 identify the snapshots present in the local cache at the time of each experiment; weights can be retrieved via `from_pretrained(repo_id, revision=sha1)`.

Provenance note for Gemma 4 E2B IT. Snapshot 70af34e was downloaded on 2026-06-26; the Gemma 4 experiments ran on 2026-06-27, when this was the only snapshot in the local cache. A second snapshot (3e22461) entered the cache on 2026-09-30 and was not used in any reported experiment.

Table S1: HuggingFace Hub repository identifiers and cache-snapshot SHA-1 hashes for the three base-model checkpoints used in this study. [†]See provenance note above.
